Education

Aug 2024 - May 2028	National University of Singapore Bachelor of Computing (Honours) in Computer Science - GPA: 4.7/5.0 (First Class Honours) - Awards: Science and Technology Undergraduate Scholarship, Dean's List AY2025/2026 Semester	Singapore
---------------------	--	-----------

Work Experience

May 2026 - Present	Sonicboom Solutions Sdn Bhd <i>Software Engineer Intern</i> - Engineered a .NET web-based SSRS reporting system with snapshot caching, reducing report loading time and improving performance - Automated TLS certificate renewal workflows, strengthening server security and eliminating recurring manual maintenance overhead - Prototyped AI-assisted development workflows using Replit AI to accelerate UI modernization of legacy product interfaces	Malaysia
Jan 2026 - Present	National University of Singapore <i>Undergraduate Teaching Assistant</i> - Mentored undergraduate students through weekly labs on object-oriented programming, functional programming and software engineering principles in Java - Reviewed 20+ students' code submissions weekly, providing feedback on design, correctness and debugging strategies	Singapore
Jun 2025 - Aug 2025	Edpulse (Subsidiary of XSEED Education Pte Ltd) <i>AI Research Intern</i> - Developed an LLM-powered chatbot enabling parents to query student academic reports using natural language - Architected a RAG pipeline with LangChain and ChromaDB, enabling context-aware multi-turn conversations with persistent memory - Designed a multi-agent LLM system analysing student behaviour through conversational AI to generate actionable educational insights	India

Projects

Wavelength: Co-Living Management App

- Built a full-stack, cross platform co-living management for iOS and Android using React Native, enabling roommates to manage shared expenses, chores, groceries and household activities
- Engineered secure authentication, real-time synchronization and optimized client-side data fetching with Appwrite and TanStack Query to improve app performance and minimize read/writes from the database
- Integrated Expo Push Notifications to deliver real-time updates, keeping users synchronized across devices
- Tech Stack: Javascript, React Native, TailwindCSS, TanStack, Appwrite, Expo

Project Sothea

- Building an offline-first asset mapping platform for geospatial asset mapping, enabling disaster response teams to collect, manage and synchronize field data in low-connectivity environments
- Implementing map usability features including pin sorting, organization and tag-based filtering for efficient retrieval and visualization of mapped assets
- Tech Stack: React Native, Expo, SQLite, Drizzle ORM, Node.js, PostgreSQL, Redis, AWS S3, Docker

Skills

Programming Languages: Java, JavaScript, TypeScript, C#, Python, HTML, CSS, C, Rust

Frameworks & Libraries: React, React Native, Expo, Node.js, Express.js, Vue.js, Flask, .NET, WPF, Tailwind CSS

Cloud, Databases & DevOps: AWS, Docker, Kubernetes, PostgreSQL, SQL Server, MongoDB, Appwrite, Git

AI & Data: OpenAI API, Hugging Face, ChromaDB, LangChain, RAG Pipelines
